easy to clip on

Starline[®] 250

Our trunking system has been developed to provide a practical solution for the supply of power, data and telecommunication cabling in new and refurbished buildings. In response to an increased demand for cable management, especially in the modern office environment, Univolt have designed the Starline system in an aesthetically pleasing profile and finish.

This modular system is not only available in three standard trunking assemblies, Univolt engineers recently developed a clip on module (plus all necessary fittings) for enlargement to a 4th compartment – the STARLINE 250.

New Extension

The new extension profile provides a simple and effective way to enhance the capacity of our trunking systems, either for existing or completely new Starline installations. Simply by snap-on mounting you can create an additional compartment with a width of 80mm – suitable for all standard outlets.
